

FROM DAIKIN AUSTRALIA

FOR AUGUST RELEASE

McQuay. When efficiency, flexibility & performance matter.

The McQuay brand was acquired by Daikin in 2006, because its range delivers engineered and flexible solutions for commercial, industrial and institutional HVAC requirements with reliable products, applications expertise and responsive support.

All McQuay products are engineered for flexibility and performance—offering choices, options and features that provide solutions for the specific requirements of your application. With McQuay, you decide the system you need to solve your HVAC challenge; then choose among factory-installed and tested options that provide the performance you require. The engineered flexibility of McQuay's products allows you to fine tune your HVAC system to meet the specific requirements of your application.

McQuay aims to deliver the best solution for each installation, providing a complete range of product options specifically designed for various applications. Typical applications include offices, retail stores, hotels, shopping centres, schools, hospitals and convention centres.

One of the most recent major commercial projects was the Melbourne Convention and Exhibition Centre, where McQuay chillers were chosen to provide HVAC cooling solutions. On completion of this project, The Melbourne Convention and Exhibition Centre was awarded a '6 Star Green Star' environmental rating by the Green Building Council of Australia.

McQuay produces a comprehensive range of air and water-cooled chillers with a variety of compressor types, to match both your application and project budget. Sizes range from 10kW to in excess of 8 MW. Complimenting McQuay's chiller product range are the airside products including double wall handling units and fan coil units.
